MOSQUITO CONTROL

THE BEST DEFENSE BEGINS WITH...
INSPECTION & IDENTIFICATION

IN THE FIELD

Our inspection teams locate, map and categorize major mosquito breeding sites, as well as record the various species of mosquitoes present. We gather rainfall information, and monitor adult mosquito activity.

TRAPPING

The latest trapping devices are used to collect, catalog & monitor mosquitoes at various locations throughout an area. Whether it's a mosquito that has had a blood meal or one that's looking for a meal-our techniques can target these specific mosquitoes to aid in suppression.

HI-TECH TRACKING

This year-round data collection is computer plotted and analyzed to direct equipment & personnel for site-specific control.

WE'RE ON THE JOB DAY & NIGHT
OPERATING A 24-HOUR TOLL-FREE HOTLINE
FOR MOSQUITO REPORTS.

MOSQUITO CONTROL

THE BEST DEFENSE...
SCIENCE THAT MAKES SENSE WITH TARGETED & PROVEN STRATEGIES

DETECTION

From hi-tech trapping methods, to computer analysis-Mosquito Control is at the forefront of detecting, monitoring & abating disease carrying mosquitoes.

SUPPRESSION

Whether it's the latest technology or proven natural methods, Mosquito Control uses a variety of sound techniques- **not just insecticides** -to control mosquitoes...all geared toward protecting the environment, while protecting you!

EDUCATION

Because people are the first line of defense against disease carrying mosquitoes- Education is an integral part of Mosquito Control's programs. We become part of the community providing education in schools, neighborhoods & businesses.

MOSQUITO CONTROL

ATTACKING THE PROBLEM AT THE SOURCE: LARVICIDING

NON-CHEMICAL

While often effective, insecticides are not always the best solution...that's why Mosquito Control opts for nature's technology whenever possible. Once major breeding sites are identified, we transport mosquito fish to these sites and let nature take over. The fish feed on mosquito larvae providing a biological solution. These fish are also offered free to homeowners for use in private ponds.

BIOCHEMICAL

If a site is not suitable for fish, we use a biochemical spray containing bacteria-not insecticide-to control the larvae. Like the fish, the bacteria affect only the mosquito larvae and prevent them from leaving the water!

ATTACKING THE PROBLEM IN FLIGHT: ADULTICIDING

It's not possible to reach every breeding ground before the mosquito takes flight. So the non-chemical and biochemical approaches are usually supplemented by various spraying methods aimed at adult mosquitoes.

PROTECTING THE ENVIRONMENT - WHILE PROTECTING YOU

SEVERAL TIMES A WEEK, SAMPLING DEVICES LOCATED THROUGHOUT THE AREA PROVIDE UPDATED INFORMATION ON ADULT MOSQUITO MOVEMENT AND NUMBERS. THIS DATA HELPS DIRECT OUR RESPONSE FROM BOTH TRUCK MOUNTED SPRAYERS AND AIRCRAFT.

MOSQUITO CONTROL

THE BEST DEFENSE...IS ALSO COST EFFECTIVE

REAL SAVINGS

At Mosquito Control, we believe concentrating efforts and resources into a scientifically sound and proven program cuts costs. In fact, our program costs significantly less than in-house programs.

LEAVE THE LIABILITY TO US

As an added bonus, a contractual agreement means that we accept legal liability for this complex insect control effort. We offer the considerable advantage of an effective program that reduces cost and accepts legal responsibility.

ECONOMIC BENEFITS TO COMMUNITIES

Whenever possible, we draw upon the resources within the community, rather than using outside sources. We establish local facilities, hire locals and purchase everything from equipment to office supplies from local merchants.

EQUIPMENT & QUALIFICATIONS

- Professional staff that include both medical entomologists and graduate biologists
- Vehicles equipped for adult mosquito control
- Vehicles equipped for larval mosquito control
- Multi-engine aircraft with Agnav navigation systems
- Laboratory facilities
- State licensed & certified personnel

AT MOSQUITO CONTROL, WE ARE MORE THAN CONTROL PROFESSIONALS, WE'RE YOUR NEIGHBORS!

MOSQUITO CONTROL

ENCEPHALITIS, WEST NILE VIRUS...
THE NEW THREAT . THE NEW REALITY

MOSQUITO CONTROL PROVIDES SOLUTIONS WITH EARLY DETECTION

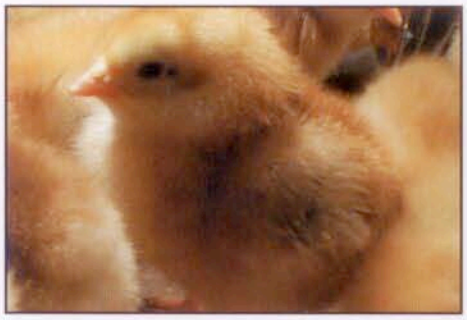
Mosquito borne diseases like Encephalitis and West Nile Virus are no longer a threat, they are a reality. The battle to stop the spread of these diseases takes a highly coordinated effort between governments and the people they serve. Mosquito Control provides the link....with resources and education that make a difference.

THE SCIENCE

Mosquito Control employs Biologists whose sole responsibility is in the detection and monitoring of disease carrying mosquitoes. Our Biologists work closely with State Health Officials and the Centers for Disease Control, and are actually providing valuable research data in the study of the growing encephalitis threat nationwide.

THE WEAPONS

Since migrating birds provide a reservoir host for an encephalitis virus, nothing can prevent movement into your area. But surveillance can lead to the breaking of the transmission cycle. Our biologists and their teams use flocks of chickens as sentinels to monitor for the presence of encephalitis virus. The caged flocks are placed at strategic locations throughout the region. Blood samples collected from these birds are then tested for evidence of virus activity.



EARLY DETECTION IS KEY. IF AN OUTBREAK IS DETECTED, MOSQUITO CONTROL CAN SUCCESSFULLY STEM THE SPREAD WITH PROVEN CONTROL METHODS AND COORDINATED EFFORTS WITH GOVERNMENT, NEWS MEDIA AND THE EDUCATION OF RESIDENTS.

MOSQUITO CONTROL

EDUCATION...THE FIRST LINE OF DEFENSE

Education is an integral part of the Mosquito Control program. Because Governments & private control companies can't do it alone, we provide extensive and targeted public education programs.

We offer presentations to civic groups, schools and businesses providing easy to read materials and power point presentations geared toward specific audiences.

Especially when it comes to disease carrying mosquitoes, education is vital. When a threat has been detected...our teams go door to door with information to help residents better protect themselves. We also work closely with local news media and government agencies to keep information updated and flowing. We've learned that keeping people informed and aware is more than half the battle.

OUR EDUCATION PROGRAM SHOWS WHAT WE ARE DOING TO COMBAT MOSQUITOES, BUT MORE IMPORTANTLY PROVIDES USEFUL TIPS. TIPS- SUCH AS PREVENTING BITES, ELIMINATING MOSQUITO BREEDING GROUNDS AND PROTECTING YOURSELF FROM ENCEPHALITIS.

PROVIDING COMMUNITIES, FAMILIES & CHILDREN THE PROTECTION THEY DESERVE
